

MAKE RECYCLED PAPER

YOU WILL NEED:

- Used writing or drawing paper OR Newspapers
- A washing up basin
- A potato masher
- An old photo frame
- Old curtain net or wire mesh

1. Tear up your paper into thin strips and soak them in a basin full of water overnight.
2. Mash up the paper and water until it goes all mushy. This is called Pulp. Now add some more water to your basin and mix it all up.
3. Cut a piece of your net or mesh so that it is slightly bigger than your photo frame. Staple this to the frame.

4. Scoop your frame into the basin of pulp. Lift the frame out flat so that it is full of the mixture and let the water drain back into the basin.

5. When all the water has drained away, put a cloth over the frame and carefully turn it upside down onto your worktop.

6. Put another cloth over your mixture and press hard to drain out any left over water. Remove the top cloth and the frame and leave your recycled paper to dry!
