

SEI Overview

CnES comments on LVIA

The additional visualisations that CnES requested are included as Figures 5.25 – 5.28 in a reissued version of EIAR Volume 3b. We have also updated the contents page/index.

We have issued a reissued Technical Appendix 5.3, Landscape and Visual Impact Assessment, detailed assessment tables, with additional cumulative analysis.

Note that none of the conclusions have changed, but Horner and MacLennan have added more detailed descriptions on the nature of the cumulative views.

Note that the changes to Technical Appendix 5.3, Landscape and Visual Impact Assessment are only from p37 onwards (within Table A5.3.4: Cumulative Effects on Landscape Character Types).

We are aware that you also queried whether information was missing from Figure 5.6, and Ramboll have checked this, and believe all the information is included. The quality is slightly diminished due to the file size restriction, but files need to be under 10MB.

SEPA holding objection

Letter of response to SEPA is included

EIAR Volume 3a Figures has been reissued and now includes Figure 7.5a-d which shows NVC survey information.

Technical Appendix 10.1 Peat Depth Survey Results by Fluid has been reissued and includes new peat probing data

NatureScot response

Letter of response to NatureScot is included

Chapter 7 of the EIAR has been reissued to correct figures related to permanent habitat loss (tracked changes version also included)

Technical Appendix 7.4 Outline Habitat Management Plan has also been reissued, to correct figures related to permanent habitat loss (tracked changes version also included)

EIAR Volume 3a Figures has been reissued and now includes updated Figure 8.2 and 8.4a and 8.4b

Note that we expect to issue Moorland Breeding Bird Survey and Corncrake Survey data as a Technical Appendix in late July 2025, and this will constitute further SEI.
